

QT - 712 - EV

Fa Ray

Quantum's QT-712-EV Elevating Mobile Float-Top Radiographic table features a revolutionary design that incorporates the flexibility of a mobile radiographic table with a floating top, coupled with advanced elevating features. Another unique characteristic of the QT-712-EV table is the special "Pivot" feature, which is designed to allow quick and easy placement of the table into various positions. The QT-712-EV pivot option was specifically designed for the Quantum Q-Rad-PQ Digital Radiographic system. The pivot feature makes the QT-712-EV Table an excellent choice for imaging patients on a single receptor DR system, as it provides the same capabilities as a fixed radiographic table, yet can be moved entirely out of the room if required.
